

RELAX! YOUR BUG PROBLEMS ARE SOLVED

MAXXTHOR[®]

HIGH PERFORMANCE TERMITICIDE & INSECTICIDE

LONG-LASTING PROTECTION
against lots of pests

ODOURLESS
water-based insecticide

SUPERIOR SOIL PENETRATION
the longest lasting termiticide

**DESIGNED FOR PROFESSIONAL
PEST MANAGERS**

ENSYSTEX[®]

MAXXTHOR is a high-performance, long-lasting termiticide & insecticide that provides PROVEN control of termites, spiders, ants, fleas, cockroaches, mosquitoes, and a wide range of other pests.

**MAXXTHOR -
A fantastic formula.**

MAXXTHOR is a long lasting, low irritant and low allergenic water-based solution that protects against termites and lots of other pests.

Its formula has been developed with upmost care to affect mosquitoes, cockroaches, biting insects and other pest insects, but not humans or pets.

Mosquito Protection Zone™

Diseases such as malaria, Zika virus, Kunjun virus and dengue fever are a constant threat. MAXXTHOR is the perfect defence against mosquitoes and other biting insects. One simple, professional solution that protects outside entertaining and dining areas, backyards, parks and outdoor recreational spaces safely and effectively.

Whilst mosquito larvae mature in water, the biting and blood sucking adults rest in vegetation and shade. MAXXTHOR is professionally applied to these daytime resting places to create the **MAXXTHOR Mosquito Protection Zone™** which provides a greater than 90% reduction in mosquito and other biting insect numbers. MAXXTHOR is not repellent to adult mosquitoes, so they rest undisturbed on the treated surfaces ensuring greater uptake of the active ingredient.

MAXXTHOR is a potent weapon in the war against pests!

MAXXTHOR®
HIGH PERFORMANCE TERMITICIDE & INSECTICIDE

MAXXTHOR - Superior termite management.

When choosing a soil-applied termite management product, you want to be sure to choose one that stays where it's put.

MAXXTHOR has a very high Log KoC value. This is a measure of how tightly it binds to the soil, and of course MAXXTHOR binds more tightly to soil particles than any other termiticide.

When this is coupled with the fact that MAXXTHOR's active constituent is highly insoluble in water, you can be sure MAXXTHOR will not move or leach from wherever your Professional Pest Manager applies it.

MAXXTHOR is water-based and is further diluted with water prior to use. After the water evaporates, a potent, long-lasting termite protection zone is left behind. Because it is purely water based, MAXXTHOR is odourless during application.

MAXXTHOR - Improving on nature.

The active ingredient in MAXXTHOR is bifenthrin. Bifenthrin belongs to a class of insecticides referred to as pyrethroids.

Pyrethroids are modelled after a natural insecticide compound called pyrethrum that is found in the extract of a plant native to Africa, the pyrethrum daisy.

MAXXTHOR is a revved up, synthetic version of pyrethrum that has many improved qualities that pyrethrum itself lacks.

MAXXTHOR - Superior soil penetration.

MAXXTHOR excels at getting to where it needs to be and staying there. Whether you're dealing with a treatment to a new building under construction or the protection of an existing property, the soil wetting properties of MAXXTHOR ensure quality results.

Keeps protecting longer.

When a soil-applied termite management product is the preferred method of termite management, a superior termiticide is required. And when you're controlling termites with a soil-applied termite management product, it makes sense to use the active ingredient that works the longest. And according to many scientific studies, MAXXTHOR has the longest lasting residual of any active ingredient currently used against termites.

MAXXTHOR has been shown in some studies to still be hard at work after more than 10 years. That's longer than any other product in use today.

Technical support across Australia.

MAXXTHOR comes with the full technical support of its manufacturer, ENSYSTEX.

ENSYSTEX is an innovative, research oriented, privately-owned, international company that has technical support personnel located across Australia.

This means total support of your Professional Pest Manager's use of MAXXTHOR is always available.

MAXXTHOR®

HIGH PERFORMANCE TERMITICIDE & INSECTICIDE

MAXXTHOR - for everything else that might be bugging you.

Highly active against all kinds of pests

MAXXTHOR is much more active against many insect pests - including termites, spiders, fleas, ants and cockroaches - than other pyrethroid active ingredients. And it's the only pyrethroid that's equally effective at low application rates against both spiders and insects. Low application rates are better for you and the environment around you.

MAXXTHOR resists breaking down even when it's exposed to sunlight. This is important in an environment such as that found here where it's sunny for long parts of the year. Unlike most other insecticides, MAXXTHOR is also highly stable in alkaline conditions. This means when it's applied to alkaline soil or alkaline surfaces such as bricks or concrete around your home, it will not degrade rapidly. MAXXTHOR can give long-lasting protection when applied to a wide range of surfaces at very low rates, even when it's subjected to difficult conditions.

Designed for Professional Pest Managers

Only Professional Pest Managers have the training, knowledge and experience to properly protect your home from the threat of termites and other pests. And MAXXTHOR was developed and formulated specifically for use by Professional Pest Managers to be highly effective and long-lasting.

In the hands of your professional pest manager, MAXXTHOR is a potent weapon in the war against pests!

MAXXTHOR is a long lasting, odourless and highly active professional choice for what's bugging you today and what might bug you tomorrow.

In the end, it's the best!

			
Protects your outside entertaining areas	Stops pests from entering your premises	Keeps vulnerable areas free from infestations	Protects your property against termites
