

RELAX! YOUR BUG PROBLEMS ARE SOLVED

MAXXTHOR[®]

HIGH PERFORMANCE INSECTICIDE

MAXXTHOR is a high performance, long-lasting insecticide that provides excellent control of a wide range of insect pests. MAXXTHOR is a potent weapon in the war against insect pests and disease!

ENSYSTEX[®]

LEADING INNOVATION IN PEST MANAGEMENT

MAXXTHOR - FOR EVERYTHING THAT MIGHT BE BUGGING YOU.

MAXXTHOR is highly active against all kinds of insect pests. MAXXTHOR is much more active against many insect pests than other pyrethroid active ingredients.

MAXXTHOR is a highly versatile pyrethroid that can be used indoors or outdoors. It is equally effective at low application rates against both spiders and insects. Low application rates make it ideal for areas that problem insects may be drawn to, such as kitchens. Low application rates are also better for you and the environment around you.

ALWAYS THERE. ALWAYS WORKING.

MAXXTHOR excels at staying around. It remains at work even in adverse conditions long after some other insecticides have totally lost their effectiveness.

MAXXTHOR resists breaking down even when it's exposed to lots of sunlight. This is important in an environment such as that found here in Vietnam where it's sunny for long parts of the year. Unlike most other insecticides, MAXXTHOR is highly stable in alkaline conditions. This means when it's applied to alkaline soil or alkaline surfaces such as bricks or concrete, it will not degrade rapidly.

MAXXTHOR can give long-lasting protection when applied to a wide range of surfaces at very low rates even when it's subjected to difficult conditions.

MAXXTHOR is an ideal choice for what's bugging you today and what might bug you tomorrow.

Diseases such as malaria, Sindbis virus, Kunjun virus and dengue fever are a constant threat.

MAXXTHOR is the perfect defence against mosquitoes and other biting insects. One simple, professional solution that protects outside entertaining and dining areas, backyards, park and outdoor recreational spaces safely and effectively.

Whilst mosquito larvae mature in water, the biting and blood sucking adults rest in vegetation and shade. MAXXTHOR is professionally applied to these daytime resting places to create the MAXXTHOR Mosquito Protection Zone™ which provides greater than 90% reduction in mosquito and other biting insect numbers.

MAXXTHOR is not repellent to adult mosquitoes, so they rest undisturbed on the treated surfaces ensuring greater uptake of the active ingredient.

MAXXTHOR[®]
HIGH PERFORMANCE INSECTICIDE

MAXXTHOR[®]

HIGH PERFORMANCE INSECTICIDE

MAXXTHOR - A FANTASTIC FORMULA

MAXXTHOR is low irritant and low allergenic. Its formula has been developed with upmost care to affect mosquitoes, cockroaches, biting insects and other pest insects, but not humans or pets.

IMPROVING ON NATURE

The active ingredient in MAXXTHOR is bifenthrin. Bifenthrin belongs to a class of insecticides referred to as pyrethroids. Pyrethroids are modelled after a natural insecticide compound called pyrethrum that is found in the extract of a plant native to Africa, the pyrethrum daisy. MAXXTHOR is a revved up, synthetic version of pyrethrum that has many qualities that pyrethrum itself lacks.

MAXXTHOR - LONGER LASTING

A single MAXXTHOR treatment continuously keeps working for longer than other pyrethroid insecticides. This is a factor of both the active ingredient and the unique nature of the Ensystem formulation. MAXXTHOR is formulated as a water-based, micro-suspension concentrate to ensure it lasts longer on all types of surfaces.. There is no better solution for controlling pest insects.

Only Professional Pest Managers have the training, knowledge and experience to properly protect your property. MAXXTHOR was developed and formulated specifically for use by Professional Pest Managers to be highly effective and long-lasting.
